Bone Scan Client Form

Client Information:

Primary Owner:		Alternative/Trainer Contact:	
Primary Cell Phone Number:		Primary Home Phone Number:	
Alternative Phone Number:		Email:	
Billing Address:			
City:		State:	Zip Code
Referring Veterinarian (if applicable):		Referring Vet's Primary Number:	
Referring Veterinary Clinic (if applicable):		Veterinary Clinic Main Number (if different than referring Vet):	

Horse's Information:

Horse's Barn and Show Name:		Horse's Discipline:		
Breed:	Sex:	Approx. Height:	Approx Weight:	Age:
Would you like shoes reapplied after the scan at an additional fee? YES / NO	Feeding Instructions:		Other instructions (handling, supplements, medications, etc.):	
Lameness History/Reason for Scan (please also have your regular vet send the history, if applicable):				

Mailing Address: PO Box 7297, Menlo Park, CA 94026
Location: 100 Ansel Lane, Menlo Park, CA 94028
Phone: (650) 854-3162 Fax: (650) 854-3658

PENINSULA EQUINE

Medical Center

Types of Scans (Please check the one you would like done on your horse)

Front End Scan: <input type="checkbox"/> Includes Forelimbs, Neck, and head	Hind End Scan: <input type="checkbox"/> Includes Hind limbs, Pelvis, neck, and back	Full Body Scan: <input type="checkbox"/> Includes all views in a front and hind end scan	Axial Scan <input type="checkbox"/> Includes multiple angles of the neck, back and pelvis – no distal limb images
---	---	--	---

Important Information:

- Horses are required to arrive at the hospital one day prior to the scan.
- Horse will be in radioactive isolation for 2 days following the scan per California state requirements. When your horse’s radioactive levels return to background level, the horse can be released.
- If you have insurance, it is your responsibility to inform the insurance agency of the procedures performed based on your plan requirements. Please check with your insurance agency prior to the bone scan to understand what will be covered by your particular plan. We unfortunately, do not have the right to access your plan with your insurance agency, so we don’t know how much of your scan will be covered. You are responsible for the total bill at the time of discharge. Any reimbursements the insurance agency provides will be sent directly to you from your insurance agency after your claim has been processed. Please let us know if your horse is insured so we can be on the lookout for any insurance paperwork that the agency asks of us. This can speed up the claim process for you.
- **Cancellation with less than 24 hours notice will incur an \$1100 charge to cover the cost of the radioactive material specifically ordered for your horse calibrated for that specific day.**

Credit Card Type: VISA MASTERCARD DISCOVER

****Unfortunately we do not accept American Express****

Credit Card Number: _____ Expiration Date: _____/_____/_____

CVC/Security Code: _____

I authorize that services rendered for this procedure may be charged to the credit card listed above at the time of service.

FAQ:

What do the prices of the bone scans include?

The bone scan price includes 3 nights of hospitalization and care, the IV Catheter, all sedation necessary for scanning, post scan Banamine (a single dose), shoe removal, and any insurance company reports. Any additional farrier work, diagnostics or therapeutics after the scan are an additional cost.

Should I be riding/exercising my horse in the week prior to the scan?

Please consult with your regular veterinarian, as this is dependent on the history and health status of the horse.

Why does my horse have to stay for so long after the scan?

Due to the radioactive material used for the scan, your horse will emit a low level of radiation for approximately 2 days. Once the horse is "cleared", or no longer emitting a detectable level of radiation, the horse can return home.

Can I visit/ touch my horse after the scan?

Again, due to radiation being emitted from the horse after the scan, California state regulations dictate that the horse cannot have visitors within their stall. This is for human safety.

Will my horse have to stay longer than 2 days?

Two days after the scan (exact time dependent on how quickly your horse metabolizes the technetium), you horse will be ready to go. If you request further diagnostics or treatments based on scan results, these procedures will occasionally necessitate a longer stay.

Do the shoes have to be removed?

Depending on the location, either 2 or all four shoes will need to be removed. We can arrange for a farrier to replace the shoes after the scan for an additional fee if you request.

Can I be in the room during the bone scan?

Unfortunately, due to the same radioactive material safety regulations, we must limit access to the room to only the necessary personnel required to safely perform the exam.

Does the procedure require anesthesia?

No. Your horse will receive mild sedatives so as not to spook at the camera or hurt themselves in the small room. This sedative is similar to what your horse would receive for a routine dental.

When will the results be available?

Each image takes 2-5 minutes of standing completely still to obtain. Scans range in size from approximately 40 to over 100 images, depending on the exam requested, uptake noted and how cooperative the horse is. As soon as all images are taken, the images must be processed. Typically, the final processed images are available the day after the exam.
